Download Input File - Process Definition Document (PDD)

1. Document Control

Version	Date	Author	Description
1.0	2026-03-10	PFCD Agent	Initial Draft (As-Is Process)

2. Process Overview

Process Name: Download Input File
Objective: To test the speed and adaptability of an RPA platform by automating data entry in a timed cha
Frequency: Initiation of an RPA platform capability test.
Estimated Volume: TBD
Manual Effort: TBD

3. Scope

3.1 In-Scope

The process begins with downloading an Excel input file from the challenge website and ends when all re

3.2 Out-of-Scope

Future-state redesign and optimization.

4. Prerequisites & Systems

4.1 Prerequisites

The RPA bot is configured and ready to run.
The challenge website is accessible.

4.2 Application Inventory

Application	Version	Access Method
Challenge Website	Unknown	As observed in evidence
RPA Platform	Unknown	As observed in evidence

5. Detailed Process Steps (As-Is)

Step #	Action	Role	System	Input	Output
1	The RPA bot navigates to the challenge website and downloads the specified Excel file containing the				
2	The RPA bot clicks the 'Start' button on the website to begin the timed data entry process and display				
3	For each row in the downloaded Excel file, the bot reads the data, dynamically locates the correspond				
4	After entering all data for a single record, the bot submits the form. The website then presents the form				
5	After submitting the final record, the bot captures the completion message from the website, which inc				

6. Business Rules & Logic

Rule 1: The challenge is timed from start to finish.
Rule 2: The position of input fields on the web form changes after each successful record submission.
Rule 3: The input data source is an Excel file containing 10 to 20 records.

7. Exceptions Handling

7.1 Business Exceptions

RPA bot fails to identify the correct field due to layout changes, causing data entry errors or process failu

7.2 Technical Exceptions

Retry, log, and escalate to technical owner if persistent.

8. Inputs & Outputs

Primary Input: Excel file with 10-20 data records
Primary Output: A final result message indicating the total time taken to complete the challenge.

9. Metrics & Risks

Success Metric: Total time taken to complete all data entries.
Risk: The RPA bot's logic may not be robust enough to handle all possible field layout permutations, lead
Mitigation: Define owner, threshold, and contingency action.
Risk: The bot may not execute fast enough, resulting in a poor performance score on the timed challenge
Mitigation: Define owner, threshold, and contingency action.

10. SIPOC

Supplier	Input	Process	Output	Customer
Challenge Website	Excel file with 10-20 data records	Download input file	Downloaded Excel file	RPA
RPA Bot	Data from Excel file row	Enter and submit data for each record	Submitted data records	Cha
Challenge Website	Confirmation of final submission	Display completion results	Total time taken resul
