

Download Input Spreadsheet - Process Definition Document (PDD)

1. Document Control

Version	Date	Author	Description
1.0	2026-03-10	PFCD Agent	Initial Draft (As-Is Process)

2. Process Overview

- Process Name: Download Input Spreadsheet
- Objective: To automate the entry of data from a spreadsheet into a dynamic web form where field positions change after each submission.
- Frequency: User clicks the 'Start' button on the RPA Challenge web page.
- Estimated Volume: TBD
- Manual Effort: TBD

3. Scope

3.1 In-Scope

- Covers the process from downloading the input spreadsheet to submitting all required records through the web form for 10 rounds.

3.2 Out-of-Scope

- Future-state redesign and optimization.

4. Prerequisites & Systems

4.1 Prerequisites

- Input data spreadsheet is available and downloaded.
- Web form is accessible and ready for input.
- Automation tool or user is prepared to process 10 rounds.

4.2 Application Inventory

Application	Version	Access Method
Excel/Spreadsheet Application	Unknown	As observed in evidence
RPA Challenge Web Portal	Unknown	As observed in evidence
RPA Challenge Web Portal, Excel	Unknown	As observed in evidence

5. Detailed Process Steps (As-Is)

Step #	Action	Role	System	Input	Output
1	Download the Excel file containing the data records to be entered.	User	RPA Challenge Web Portal	Web page with download link	Downloaded Excel file
2	Initiate the challenge by clicking the 'Start' button, which begins the countdown and enables form submission rounds.	User	RPA Challenge Web Portal	Ready web page	Challenge timer starts, form enabled
3	Read the next record from the downloaded Excel file for entry.	Automation Bot	Excel/Spreadsheet Application	Excel file	Single data record

Step #	Action	Role	System	Input	Output
4	Identify the correct input fields on the web form, as their positions change after each submission.	Automation Bot	RPA Challenge Web Portal	Data record, dynamic form	Mapped data to fields
5	Input the mapped data into the corresponding form fields.	Automation Bot	RPA Challenge Web Portal	Mapped data	Form populated with data
6	Click the 'Submit' button to send the data for the current round.	Automation Bot	RPA Challenge Web Portal	Populated form	Form submission, next round triggered
7	Repeat steps 3-6 for each record in the spreadsheet, for a total of 10 rounds.	Automation Bot	RPA Challenge Web Portal, Excel	Remaining records	All records submitted

6. Business Rules & Logic

- Rule 1: All form fields must be filled for each record.
- Rule 2: Field mapping must be dynamic to accommodate changing positions.
- Rule 3: Process must complete 10 rounds without errors.
- Rule 4: No penalties for submissions before clicking 'Start'.

7. Exceptions Handling

7.1 Business Exceptions

- Download fails or file is corrupted
- Start button unresponsive
- Spreadsheet read error
- Field not found or mapping error
- Input error or validation failure
- Submission fails or error message displayed
- Process interruption or incomplete rounds

7.2 Technical Exceptions

- Retry, log, and escalate to technical owner if persistent.

8. Inputs & Outputs

- Primary Input: Excel data file
- Primary Output: All spreadsheet records successfully submitted via the web form

9. Metrics & Risks

- Success Metric: Number of successful submissions
- Success Metric: Accuracy of data entry
- Success Metric: Time taken to complete all rounds
- Success Metric: Number of errors or retries
- Risk: Automation fails to identify dynamic fields
- Mitigation: Define owner, threshold, and contingency action.
- Risk: Data entry errors due to field mapping issues

- Mitigation: Define owner, threshold, and contingency action.
- Risk: Process interruption due to system or network failure
- Mitigation: Define owner, threshold, and contingency action.
- Risk: Incomplete submission of all records
- Mitigation: Define owner, threshold, and contingency action.

10. SIPOC

Supplier	Input	Process	Output	Customer
RPA Challenge Web Portal	Excel data file	Download Input Spreadsheet	Downloaded Excel file	User/Automation Bot
User	Downloaded Excel file	Start Challenge	Challenge timer starts	Automation Bot
Excel/Spreadsheet Application	Excel file	Extract Data from Spreadsheet	Single data record	Automation Bot
Automation Bot	Data record, dynamic form	Map Data to Dynamic Form Fields	Mapped data to fields	Automation Bot
Automation Bot	Mapped data	Enter Data into Form	Form populated with data	RPA Challenge Web Portal
Automation Bot	Populated form	Submit Form	Form submission, next round triggered	RPA Challenge Web Portal
